

Cscape EnvisionRV

Remote View Software for Operator Control Stations

View and access
remote OCS
controllers via
your PC.

Reduce complexity. Save time. Save money.
View and access your OCS remotely with
software specifically designed for OCS.

Cscape™ EnvisionRV (Remote View) is a low-cost, powerful Windows® based software application that will allow you to view *and* access remote Horner OCS controllers via a personal computer. Horner's operator control stations combine a controller, I/O, operator interface and networking into one convenient unit using a single programming package called Cscape.™

With EnvisionRV, graphical objects look and behave the same on the PC as they do on the OCS. This feature reduces your training costs and can significantly speed up your implementation.

Fast to configure *and* fast to respond, EnvisionRV can be setup and configured in minutes...not hours or days. The full OCS graphics engine runs on the PC...only exchanging register data with the OCS. EnvisionRV minimizes the impact on your controller, offloading a majority of the display work to the PC. The result is a highly responsive user interface.

EnvisionRV uses the Horner CsCAN protocol to transfer data, giving you the flexibility to support various communications options including: Ethernet, serial, wireless, telephone, CAN and cellular. With CsCAN you can easily connect EnvisionRV to a single unit on your CsCAN network and transfer data to/from any OCS device on the network seamlessly.

- Real-time connectivity to OCS
- 3 levels of security per screen
- EnvisionRV's project utility allows you to easily organize device files
- User selectable dockable or floating tool bars
- Import Cscape .pgm files
- Online web support with application engineers
- Use existing screens or create new ones with Cscape

System Requirements:
 Microsoft Windows XP or Vista
 400 MHz Pentium II or better;
 40 MB disk space for installation,
 internet access for activation and
 XL Series, NX, LX or QX OCS.

Windows is a registered trademark
 of Microsoft Corporation in the
 United States and other countries.
